## Backend Workshop -9-

---

## Workshop

---

Subject:

- NODE.js Template

### Learning Goals

- Working on NODE.js Template

### Introduction

- Node.js templates are tools for generating dynamic content in server-side applications using JavaScript. They allow you to merge HTML, CSS, and JavaScript code to create and serve dynamic content to clients, enhancing web application performance and user experience.

### Prerequisites

- We will use the VSCode.

Lets start

**1. What is a template engine in Express.js, and why is it used?**

Answer:

**2. Which template engines are commonly used with Express.js, and how do they differ?**

Answer:

**3. How do I set up and configure a template engine in my Express.js application?**

Answer:

**4. What is the role of view templates in Express.js, and how are they rendered?**

Answer:

**5. How can I pass data from my Express.js routes to templates for rendering?**

Answer:

**6. What are template variables, and how are they used within Express.js templates?**

Answer:

**7. How do I create and render dynamic content using templates in Express.js?**

Answer:

**8. What is the significance of template layout and partials in Express.js applications?**

Answer:

**9. How are errors or exceptions managed when processing Express.js templates?**

Answer:

**10. What are some best practices and potential performance considerations when working with templates in Express.js?**

Answer:
